Report Overview

MPEG-Hydrazide, also known as Methoxy Polyethylene Glycol Hydroxysuccinimide, is a chemical compound that belongs to the class of polyethylene glycol (PEG) derivatives. It is a white to off-white solid and is commonly used in the field of biochemistry and molecular biology. MPEG-Hydrazide is primarily employed as a reactive PEGylation agent, which is a process used to conjugate proteins, peptides, and other biomolecules with PEG polymers. This modification, known as PEGylation, can improve the solubility, stability, and bioavailability of the conjugated biomolecules, as well as potentially reducing their immunogenicity. MPEG-Hydrazide contains a hydroxysuccinimide (NHS) ester group, which is highly reactive towards primary amines, making it a versatile reagent for the conjugation of amine-containing biomolecules with PEG chains. The product is typically supplied as a solid and is used in research and development applications, particularly in the pharmaceutical industry for the development of therapeutic proteins and drug delivery systems.
