Report Overview

MR-Guided Laser Interstitial Thermal Therapy (MRg LITT) is a minimally invasive neurosurgical procedure that utilizes magnetic resonance imaging (MRI) guidance and laser technology to treat various brain disorders. This advanced technique involves the insertion of a thin laser fiber into the targeted brain tissue, which is then heated to a specific temperature, thereby destroying abnormal cells or lesions while preserving healthy surrounding tissue. MRg LITT is particularly effective in treating conditions such as brain tumors, epilepsy, and movement disorders. The real-time MRI guidance ensures precise targeting and monitoring of the treatment area, allowing for optimal therapeutic outcomes with minimal side effects and faster recovery times compared to traditional open brain surgery.
