Abstracts

In molecular biology, messenger ribonucleic acid (mRNA) is a single-stranded molecule of RNA that corresponds to the genetic sequence of a gene, and is read by a ribosome in the process of synthesizing a protein. Transcriptome sequencing, or RNA sequencing (RNA-Seq), provides fundamental insights into how genomes are organized and regulated?giving us valuable information about the internal state of cells and how altered expression of genetic variants contributes to complex disease research. Need for new platforms for accurate RNA data interpretation and advancements made in bioinformatics, rise in cases of metabolic disorders, multiple sclerosis, and other diseases, growing demand for RNA Sequencing over the conventional technology, are factors that drive the growth of the mRNA sequencing market. In addition, increase in healthcare expenditure; partnerships & collaborations between key players to facilitate development; rise in R&D activities are factors that boost the market growth for mRNA sequencing. However, the need for skilled professionals, the huge initial capital investment on infrastructure, problems associated with the storage of sequencing data are factors that hinder the mRNA sequencing market growth.

The global mRNA Transcriptome Sequencing market size was estimated at USD 4433.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
