Report Overview

The MTF Measuring Device is a specialized piece of equipment designed to quantify the Modulation Transfer Function (MTF) of optical systems, such as lenses and imaging sensors. MTF is a critical parameter that describes the ability of an imaging system to reproduce details and contrasts at various spatial frequencies. This device typically employs a test target with a known MTF pattern and uses a camera or other imaging sensor to capture the image. By analyzing the captured image and comparing it to the original pattern, the MTF of the system can be calculated.
