Abstracts

A Multi-cabin Hyperbaric Oxygen Chamber is a medical device designed to provide hyperbaric oxygen therapy (HBOT) to multiple patients simultaneously. Unlike a single chamber, this type of chamber has multiple compartments or cabins, each capable of accommodating one or more patients. The chamber is pressurized with 100% oxygen or ambient air, allowing patients to breathe oxygen through masks, hoods, or endotracheal tubes at higher-than-normal atmospheric pressures. The multi-cabin design enables the treatment of several individuals at once, making it efficient for treating groups or for medical facilities with high patient volumes. This type of chamber is commonly used in hospitals, specialized clinics, and for treating conditions such as decompression sickness, severe infections, and chronic wounds.

The global Multi Cabin Hyperbaric Oxygen Chamber market size was estimated at USD 186.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
