Report Overview

The multi-channel pan-vascular interventional surgical robot is an advanced medical device designed to perform minimally invasive vascular procedures across multiple anatomical regions, including coronary, peripheral, and neurovascular systems. It integrates robotic precision, real-time imaging, and multi-channel catheter control to enhance procedural accuracy, reduce physician fatigue, and minimize patient trauma. By enabling remote or semi-autonomous operations, this technology improves access to complex interventions while reducing radiation exposure for healthcare providers. The system typically features haptic feedback, AI-assisted navigation, and compatibility with standard interventional tools, positioning it as a transformative solution in endovascular surgery. Its versatility across vascular specialties distinguishes it from single-application robotic systems, addressing a broader clinical need for standardized, high-precision interventions.
