### Report Overview

The multi-layer aquarium filter is a sophisticated filtration system designed to maintain optimal water quality in aquariums by employing multiple stages of mechanical, biological, and chemical filtration. Typically constructed with stacked trays or compartments, each layer targets specific impurities?mechanical filtration removes debris, biological filtration breaks down harmful ammonia and nitrites using beneficial bacteria, and chemical filtration absorbs dissolved pollutants through media like activated carbon or zeolite. These filters are favored for their efficiency, modularity, and ability to support diverse aquatic ecosystems, from freshwater to marine setups. Their design often prioritizes ease of maintenance, allowing users to customize or replace individual layers without disrupting the entire system.
