Report Overview

A Multi-Person Negative Pressure Isolation Tent is a specialized medical equipment designed to provide isolation and containment for multiple patients in a healthcare setting. This tent operates under negative pressure, which means that air pressure inside the tent is lower than the surrounding atmospheric pressure. This design prevents airborne contaminants from escaping into the environment, thereby reducing the risk of infection transmission. The tent is typically made of durable, easy-to-clean materials and is equipped with HEPA filters to further ensure a sterile environment. It is often used in emergency situations, such as during outbreaks of infectious diseases, to isolate and treat multiple patients simultaneously while maintaining the safety of healthcare workers and other individuals in the vicinity. The tent's negative pressure system, combined with its isolation capabilities, makes it a critical tool in managing the spread of airborne diseases and providing a controlled treatment environment for affected individuals.
