Abstracts

A Multi-Tube Variable Area Flow Meter is a device that measures the flow rate of fluids in a system by utilizing multiple tubes, each with a varying cross-sectional area. As the fluid flows through the tubes, the pressure drop across each tube changes depending on the flow rate. By measuring the pressure drop in each tube, the flow rate can be determined. This type of flow meter is known for its high accuracy and ability to measure low flow rates. It consists of a manifold that connects the multiple tubes and a pressure sensor to measure the pressure drop.

The global Multi Tube Variable Area Flow Meter market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
