Report Overview

The multifunctional micro gloss meter is a precision instrument designed to measure the glossiness of surfaces across various materials, including metals, plastics, ceramics, and coated substrates. It operates by directing a light beam at a specific angle onto the surface and quantifying the intensity of the reflected light, providing an objective gloss value (measured in gloss units, GU). This device is widely used in industries such as automotive, electronics, coatings, and packaging, where surface finish quality is critical for aesthetics, functionality, and compliance with industry standards. Advanced models may feature multiple measurement angles (e.g., 20°, 60°, 85°) to accommodate different gloss levels, portability for on-site inspections, and digital connectivity for data logging and analysis, making it essential for quality control, R&D, and production line applications.
