### Report Overview

A Multiplace Hyperbaric Chamber is a medical device designed to treat patients suffering from various conditions by exposing them to increased atmospheric pressure in a controlled environment. This chamber is larger than a single-person hyperbaric chamber and can accommodate multiple patients or a patient and medical staff simultaneously. The primary purpose of a multiplace hyperbaric chamber is to deliver hyperbaric oxygen therapy (HBOT), which involves breathing 100% oxygen at higher than normal atmospheric pressure. This therapy is used to treat a range of conditions, including decompression sickness, carbon monoxide poisoning, and non-healing wounds. The chamber is equipped with advanced monitoring systems, oxygen delivery systems, and communication devices to ensure patient safety and comfort during treatment. It is typically operated by trained medical professionals who oversee the therapy sessions and monitor the patients' vital signs throughout the process.
