Report Overview

A Multiturn Absolute Encoder is a type of rotary encoder that provides precise positional feedback over multiple rotations. It is designed to maintain accurate position information even after power loss or system restarts, making it ideal for applications requiring high reliability and precision. This encoder uses a combination of mechanical and electronic components to track position over multiple turns. The mechanical part typically consists of a rotating shaft with a series of markings or slots, while the electronic part includes sensors that read these markings as the shaft rotates. The output is usually a digital signal that represents the absolute position of the shaft, allowing for highly accurate and repeatable positioning in various industrial, robotics, and automation applications.
