## Abstracts

Municipal Accounting Software is a fiscal management information system specifically designed for governments and public sectors. By integrating modules such as budget management, treasury payments, asset management, payroll calculation, and final accounts reporting, the system enables full-cycle tracking of public funds from budget to execution to final accounts. The software incorporates standard interfaces for fiscal operations, supporting data exchange with the Golden Finance Project and the centralized treasury payment system. Through project database management, it achieves transparent supervision of special funds. Its intelligent reconciliation engine automatically matches fiscal appropriations with actual expenditures and identifies anomalies such as project delays. Specifically tailored to the characteristics of municipal operations, the system features specialized functions such as infrastructure asset depreciation calculation, full lifecycle accounting for PPP projects, and automatic generation of comprehensive government financial reports. Leading systems now integrate big data technology to establish fiscal fund performance evaluation models, dynamically displaying key indicators such as debt repayment capacity and the cost-effectiveness of public services through a data visualization dashboard. This software has become a core tool for improving the quality of government accounting information, enhancing public finance transparency, and preventing debt risks, driving the transformation of municipal financial management from an accounting-oriented to a governance-oriented approach. The global municipal accounting software market exhibits significant regional differences. The North American market is the most mature, with systems deeply integrating fund accounting and performance management to meet the highly complex disclosure needs of municipal bond information. The European market, driven by EU accounting standards, emphasizes cross-border financial data comparability in its software. The Asia-Pacific market is growing rapidly, with systems characterized by parallel bookkeeping and integrated budget performance

management. The Latin American and African markets are in their early stages of development, primarily relying on localized versions from international vendors and standardized systems supported by institutions such as the World Bank. The global market is evolving from basic accounting to intelligent fiscal decision-making platforms that integrate big data analytics, with debt risk early warning and public service cost-benefit assessment becoming the latest development focus.

The global Municipal Accounting Software market size was estimated at USD 122.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
