### Report Overview

Mycotoxin detection involves identifying and quantifying toxic secondary metabolites produced by fungi, such as aflatoxins, ochratoxins, and fumonisins, which contaminate agricultural products like grains, nuts, and spices, posing significant health risks to humans and livestock. The market for mycotoxin detection is driven by stringent food safety regulations, increasing global trade of agricultural commodities, and growing awareness of mycotoxin-related health hazards. Key technologies include chromatography-based methods (HPLC, LC-MS/MS), immunoassays (ELISA), and rapid screening tests, with a rising trend toward portable and on-site testing solutions. The market is segmented by type (aflatoxins, deoxynivalenol, zearalenone, etc.), technology, food type (cereals, dairy, meat), and end-use (food manufacturers, feed industry, regulatory bodies). Europe and North America dominate due to strict regulatory standards, while Asia-Pacific exhibits high growth potential due to expanding agricultural output and increasing food safety concerns. Key players include Thermo Fisher Scientific, Merck KGaA, and PerkinElmer, with innovation focused on automation, multiplex detection, and cost-effective solutions. Challenges include variability in mycotoxin occurrence and the need for harmonized global testing protocols.
