Abstracts

Nano ultrasonic high speed disperser is a kind of high-end intelligent equipment for homogenization and dispersion of nano-size slurry. Due to the high-speed rotation of the dispersing wheel with the highest linear speed of 60m/s and the effect of the stopper plate, the slurry will form a specific running track in the dispersing barrel. Due to the centrifugal force of the dispersing wheel, the slurry will leave the outer wall of the dispersing wheel at a high speed and hit the wall of the dispersing barrel at a high speed. When the slurry is released from the wheel wall at a high speed, a vacuum will be formed instantly on the surface of the wheel wall, so that the slurry inside the dispersion wheel will pass through the dispersion hole on the dispersion wheel under the action of vacuum, and the slurry stays in the dispersion barrel for only about 30 seconds.

The global Nano Ultrasonic High Speed Disperser market size was estimated at USD 185.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
