Abstracts

Nano-ultrasonic high-speed disperser is a high-end intelligent equipment mainly used for homogenizing and dispersing nano-slurry. Its working principle is to use the high-speed rotation of the dispersing wheel (linear speed up to 60m/s) and the action of the baffle to form a specific running trajectory of the slurry in the dispersing barrel. Due to the centrifugal force of the dispersing wheel, the slurry will break away from the outer wall of the dispersing wheel at high speed and hit the wall of the dispersing barrel at high speed.

The global Nanosonic High Speed Dispersing Machine market size was estimated at USD 118.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.35% during the forecast period.
