Abstracts

Natural Gas Separation Membrane Module utilizes membrane technology to selectively remove impurities and separate valuable components from natural gas streams. Operating based on the principle of differential gas permeability through the membrane material, it allows specific gases, such as carbon dioxide and hydrogen sulfide, to permeate more readily than others, resulting in purified natural gas with reduced impurities. These modules find applications in carbon dioxide removal for pipeline quality specifications, hydrogen sulfide removal for safety, and nitrogen removal for energy content optimization.

The global Natural Gas Separation Membrane Module market size was estimated at USD 350.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
