Report Overview

Natural Paclitaxel is a naturally occurring compound derived from the bark of the Pacific Yew tree (*Taxus brevifolia*). It is a potent anti-cancer drug that belongs to the taxane family of compounds, which are known for their ability to stabilize microtubules, a key component of the cellular cytoskeleton. This stabilization prevents cells from dividing, thereby inhibiting the growth of cancer cells. Natural Paclitaxel is used in the treatment of various types of cancer, most notably ovarian, breast, and lung cancer. The product is typically extracted from the bark of the yew tree through a labor-intensive and environmentally sensitive process, as it requires the destruction of the tree. Due to the limited availability and environmental concerns, synthetic versions of Paclitaxel have been developed to meet the medical demand while preserving the natural habitat.
