Report Overview

A Natural Swimming Pool is an innovative and environmentally friendly alternative to traditional swimming pools. It is a self-sustaining ecosystem that combines the aesthetics of a natural pond with the functionality of a swimming pool. This type of pool is designed to mimic the natural processes of water purification, using a combination of plants, bacteria, and other microorganisms to filter and clean the water without the need for chemical treatments. The pool is typically divided into two main sections: the swimming area and the biological filtration zone, which houses the plants and microorganisms responsible for the water purification process. Natural Swimming Pools promote biodiversity, reduce the environmental impact of pool maintenance, and offer a more natural and aesthetically pleasing swimming experience.
