Report Overview

A Near Infrared Oxygenation Monitor is a medical device that utilizes near-infrared spectroscopy (NIRS) technology to non-invasively measure tissue oxygenation levels in patients. This device is designed to assess the oxygenation status of tissues, particularly in critical care settings, by emitting near-infrared light into the body and measuring the light that is absorbed and scattered back. The technology allows for continuous, real-time monitoring of oxygen saturation in tissues, which is crucial for detecting and managing conditions such as hypoxia, shock, and sepsis. The monitor provides valuable data to healthcare professionals, enabling them to make informed decisions regarding patient care, such as adjusting oxygen therapy or initiating resuscitation measures. The product is typically used in conjunction with other monitoring equipment and is an essential tool in the management of critically ill patients.
