Report Overview

A negative pressure ambulance is an ambulance with special enhancements to help safely treat and transport patients with infectious diseases. The main feature of the negative pressure ambulance is its negative pressure filtering and disinfecting system, which ensures that the air pressure inside the medical cabin is lower than the outside, and the air flow can only flow from the high-pressure side outside the medical cabin to the low-pressure side inside the medical cabin. This prevents the contagious disease virus exhaled by the patients from infecting the EMS workers in the vehicle and polluting the environment along the way.
