Report Overview

Negative Pressure Therapy Units, also known as NPWT or vacuum-assisted closure therapy, are advanced medical devices designed to promote wound healing by applying controlled negative pressure to a wound site. These units consist of a pump, a canister, and a dressing system that creates a sealed environment around the wound. The negative pressure generated by the pump helps to remove excess fluid, reduce edema, and stimulate blood flow to the wound area, thereby accelerating the healing process. Negative Pressure Therapy Units are particularly effective in managing chronic wounds, such as diabetic ulcers, pressure ulcers, and post-surgical wounds, by providing a controlled and sterile environment that minimizes the risk of infection and promotes tissue regeneration.
