Abstracts

CCS integrated busbar is one of the core components of new energy battery packs. It is connected into a whole by hot pressing or riveting processes, such as signal acquisition components (wire harness FPCFFC, etc.), plastic structural parts, copper and aluminum busbars, etc., to achieve high-voltage series and parallel connection of battery cells, as well as temperature sampling and battery cell voltage sampling functions. It is part of the BMS system and can be used in new energy power batteries, energy storage batteries and other fields. Compared with traditional wiring harness busbars, CCS integrated busbars have the characteristics of lightweight, integration, precision and safety, which can improve the space utilization and assembly efficiency of battery packs, and meet the needs of new energy batteries for higher energy density, high safety, and assembly automation. With the continuous development of new energy vehicle power battery integration technology and the acceleration of its application in the energy storage field, driven by factors such as automation, cost reduction and efficiency improvement, the current CCS technology route shows a diversified development trend. Information collection solutions include wiring harnesses, PCB, FPC, FFC, FDC and other solutions. The integrated processes also include injection molding brackets, blister molding, hot pressing, die-cut PC, etc. At the same time, the industry is constantly innovating, and new solutions such as FCC sampling components, FPC/CCS de-SMT, and intelligent CCS are constantly being nurtured.

The global New Energy Battery Ccs Integrated Busbar market size was estimated at USD 1850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
