Cholesterol is a kind of sterol or steroid, of which the chemical formula is $C_{27}H_{46}O$. Cholesterol is a kind of flaky crystal under solid state, white and odorless. At present, cholesterol is mainly produced with lanolin and is industrially applied as raw materials of Vitamin D3, additive to prawn feed, medicine, as well cosmetics emulsifier and etc. Cholesterol is used in pharmaceutical, cosmetic and crustacean feed applications. Based on the product type, the Cholesterol is primarily split into NF Grade, BP Grade, Others, etc. Cholesterol NF (purity?95%) is used as an emulsifying agent in cosmetic preparations as Cholesterol functions as an excellent moisturizer in skin conditioning cosmetics. Besides this Cholesterol NF is also used as starting material for Vitamin D3 production as well as technical applications such as liquid crystals. Cholesterol BP (purity?91%) is a feed grade Cholesterol mainly used in Shrimp feed/premixes. Cholesterol is an essential molecule for the synthesis of molting hormones, sex hormones, bile acids, vitamin D and is a building block of shrimp tissues. Cholesterol cannot be metabolized by shrimp and is therefore added to shrimp feed. It improves the yield in many ways, survival, FCR and growth. The cholesterol market is influenced by stringent regulatory standards governing its use in pharmaceuticals, animal feeds, and cosmetics. Compliance with safety and efficacy guidelines is essential for manufacturers to ensure product quality and consumer trust. Regulatory bodies impose rigorous standards to safeguard public health, which can pose challenges but also drive innovation and quality improvements in the industry. The trend toward personalized nutrition and skincare solutions is creating new opportunities for cholesterol applications. Consumers are increasingly seeking products tailored to their

specific health and beauty needs. Incorporating cholesterol into customized formulations allows for targeted benefits, such as improved skin hydration or enhanced nutrient absorption, meeting the demand for individualized products. Emerging economies, particularly in the Asia-Pacific region, are witnessing significant growth in demand for cholesterol. Rapid urbanization, increasing disposable incomes, and a growing middle class are driving the consumption of pharmaceuticals, cosmetics, and high-quality animal products. The expanding healthcare and personal care sectors in countries like China and India present lucrative opportunities for market players.
