Report Overview

NFT Hydroponic Lettuce refers to lettuce plants cultivated using the Nutrient Film Technique (NFT), a hydroponic method that involves growing plants without soil. In this technique, a continuous flow of nutrient-rich water is circulated over the plant roots, providing them with essential nutrients and oxygen. The lettuce plants are typically grown in a sloped channel or gully, with the roots suspended in the nutrient film. This method allows for efficient nutrient uptake, reduced water usage, and a controlled environment that can lead to faster growth and higher yields compared to traditional soil-based cultivation. NFT Hydroponic Lettuce is often associated with sustainable and modern agricultural practices, as it minimizes the risk of soil-borne diseases, reduces the need for pesticides, and allows for year-round production in controlled environments.
