Report Overview

The Niti Memory Alloy Biliary Stent is a medical device designed for the treatment of biliary obstructions, particularly in cases of malignant bile duct strictures. Made from a nickel-titanium alloy, this self-expanding stent is characterized by its shape memory properties, allowing it to regain its pre-determined shape once deployed within the body. The stent is inserted endoscopically into the bile duct to relieve blockages, thereby facilitating the flow of bile from the liver to the small intestine. It is designed to be durable, with the ability to maintain patency over an extended period, and to minimize the risk of complications such as migration or occlusion. The Niti Memory Alloy Biliary Stent is an important tool in the palliative care of patients with advanced diseases affecting the biliary system, aiming to improve their quality of life by reducing symptoms associated with bile duct obstruction.
