## Abstracts

Nitrogen-filled high-temperature box is a kind of equipment used for high-temperature treatment of materials, which can carry out nitriding treatment on materials at high temperature. The interior of the equipment is filled with nitrogen to create a nitriding environment, so that a layer of nitride film is formed on the surface of the material, which improves the hardness and wear resistance of the material. Nitrogen-filled high-temperature ovens are widely used in the surface treatment and modification of metals, ceramics, plastics and other materials, and can also be used in the production of electronic components and semiconductor materials.

The global Nitrogen Filled High Temperature Box market size was estimated at USD 125.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
