Report Overview

Nitrogen-Infused Beer is a unique type of beer that has been infused with nitrogen gas during the brewing process. This results in a smoother, creamier, and more velvety mouthfeel compared to traditional beers that are carbonated with carbon dioxide. The nitrogen gas is typically introduced through a widget or canister in the packaging, which releases the gas when the beer is poured. This creates a fine, dense foam and a cascading effect, giving the beer a distinctive appearance and texture. Nitrogen-infused beers are often associated with a more subtle flavor profile and a gentle, creamy finish, making them a popular choice for those who prefer a less aggressive carbonation and a more nuanced taste experience.
