Abstracts

Non-asbestos fibre jointing material is a modern gasket material designed as a safer alternative to traditional asbestos-based products. It is composed of a mixture of synthetic fibres, organic fibres, fillers, and rubber binders such as nitrile, EPDM, or neoprene, which are compressed to form dense sheets. These materials provide excellent sealing capabilities, along with resistance to heat, pressure, chemicals, and oils, making them suitable for use in various industrial applications. Non-asbestos fibre jointing materials are commonly used in the automotive, petrochemical, power generation, and marine industries for creating gaskets and seals in machinery, pipes, and flanges. The shift to non-asbestos alternatives came about due to the health hazards associated with asbestos, which can cause serious respiratory illnesses when inhaled. Non-asbestos materials offer a similar performance to compressed asbestos fibre (CAF) but without the risks to human health and the environment. These materials can be tailored to meet specific application requirements, such as high temperature and chemical resistance, and have become the industry standard for sealing and jointing in critical environments. Their versatility and safety make non-asbestos fibre jointing materials a preferred choice across many sectors.

The global Non Asbestos Fibre Jointing Material market size was estimated at USD 850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
