Abstracts

Non-bonded marine flexible pipelines are widely used in offshore oil and gas exploration, featuring a multi-layer structure where the layers are not bonded with adhesives. Without bonding, the layers can move independently, providing the pipeline with superior flexibility, fatigue resistance, and high-pressure performance. Typically constructed with an inner liner, corrosion-resistant layers, pressure-bearing layers, and an outer protective layer, non-bonded flexible pipelines can handle complex pressure variations and dynamic loads in deepwater environments. They are commonly used in oil and gas transportation, particularly in floating production storage and offloading (FPSO) systems and other offshore oil fields.

The global Non Bonded Marine Flexible Pipeline market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
