### Report Overview

Non-ferrous hot rolling oils are specialized lubricants used in the metalworking industry to facilitate the hot rolling process of non-ferrous metals such as aluminum, copper, brass, and titanium. These oils serve multiple functions, including reducing friction between the metal and rollers, preventing oxidation and scaling at high temperatures, dissipating heat, and enhancing surface finish quality. Formulated with high-performance additives like extreme pressure (EP) agents, anti-wear compounds, and corrosion inhibitors, they are designed to withstand the extreme conditions of hot rolling while ensuring consistent metal deformation and minimizing equipment wear. Their composition varies based on the specific metal being processed, operational temperatures, and rolling speed requirements, making them a critical component in maintaining efficiency and product integrity in non-ferrous metal production.
