Abstracts

A non-ferrous metal cold heading machine is used in the manufacturing process to form non-ferrous metal materials into specific shapes, typically fasteners like bolts, screws, and rivets. Unlike ferrous metals (which contain iron), non-ferrous metals do not contain significant amounts of iron and are often more resistant to corrosion. Cold heading machines work by forcing the metal through a die to create the desired shape without heating the material excessively. This process is crucial for producing precise components used in various industries, including automotive, aerospace, and construction.

The global Non Ferrous Metal Cold Heading Machine market size was estimated at USD 485.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
