Report Overview

A non-ferrous metal cold heading machine is used in the manufacturing process to form non-ferrous metal materials into specific shapes, typically fasteners like bolts, screws, and rivets. Unlike ferrous metals (which contain iron), non-ferrous metals do not contain significant amounts of iron and are often more resistant to corrosion. Cold heading machines work by forcing the metal through a die to create the desired shape without heating the material excessively. This process is crucial for producing precise components used in various industries, including automotive, aerospace, and construction.
