Abstracts

The measurement of cardiac output (CO) is essential in medical practice. In the past, invasive monitoring with a pulmonary artery catheter (PAC) was the gold standard used to measure CO, but in recent years, many minimally invasive or noninvasive devices have been developed to measure CO. Cardiac output gives information about tissue perfusion and oxygen delivery and can identify patients at high risk of mortality or morbidity. The non-invasive cardiac output monitoring device market growth is mainly attributed to factors such as increase in prevalence of cardiovascular diseases and rise in geriatric population.

The global Non Invasive Cardiac Output Monitoring Device market size was estimated at USD 734.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
