Report Overview

Non-ionic detergents, also known as nonionic surfactants, are a class of detergents that do not dissociate into ions in solution. They are characterized by their ability to form micelles and emulsify oils and fats without forming charged particles. These detergents are widely used in various applications, including household cleaning products, industrial processes, and personal care items due to their mildness, low irritation potential, and compatibility with other surfactants. Non-ionic detergents are derived from various sources, such as ethoxylation of alcohols or fatty acids, and are known for their stability in hard water and ability to reduce surface tension effectively. They are often used in combination with other types of surfactants to enhance cleaning performance and reduce environmental impact.
