Report Overview

A non-loadbearing steel stud is a component used in construction for framing interior walls and partitions. Unlike loadbearing studs, which support the weight of the structure, non-loadbearing studs are used primarily to create divisions within a building and do not bear significant weight from the structure above. They are typically made of galvanized steel and come in various sizes and shapes to accommodate different wall configurations. Non-loadbearing steel studs are lightweight, durable, and fire-resistant, making them a popular choice in commercial and residential construction projects.
