Report Overview

Non-sterile probe covers are single-use protective sheaths designed to maintain hygiene and prevent cross-contamination during medical examinations involving ultrasound or other types of probes, particularly in non-invasive procedures such as abdominal, obstetric, or cardiac imaging. Unlike sterile variants used in surgical or invasive settings, non-sterile covers prioritize cost-efficiency and convenience while still providing a barrier against bodily fluids and microbial transfer. Typically made from materials like latex, polyurethane, or polyethylene, these covers ensure patient and practitioner safety by minimizing infection risks in outpatient clinics, diagnostic centers, and emergency care. The market is driven by rising demand for infection control, increased ultrasound applications, and regulatory standards mandating disposable protective equipment in healthcare settings.
