Abstracts

An active grille shutter system is part of a range of products that improve vehicle aerodynamics while generating significant energy savings. Active Grille shutters are designed for extreme air-flow conditions (10 % of driving conditions): the active grille shutter system opens the radiator air inlet at the front of the vehicle when the air conditioning is at the highest setting and helps improve the aerodynamic drag coefficient by an average of 9%. When closed, they halve engine warm-up times in very cold weather. Non-Visible Active Grille Shutters (NVAGS) are hidden or integrated active grille shutters designed to optimize a vehicle's aerodynamics, fuel efficiency, and engine cooling while remaining concealed within the front grille or bumper structure. Unlike traditional visible Active Grille Shutters (AGS), which can be seen through the grille slats, NVAGS are hidden behind the outer grille or body panel, maintaining a seamless design. As consumer affluence increases, there's a heightened preference for high-end vehicles that feature distinctive and stylish front grilles, enhancing their aesthetic appeal. Both consumers and manufacturers are prioritizing unique front grille designs to distinguish vehicles in a competitive market, leading to increased demand for customizable grille options. The shift from traditional metal to materials like plastic, carbon fiber, and aluminum allows for lighter, more versatile, and innovative grille designs, contributing to overall vehicle weight reduction and performance enhancement. The adoption of Active Grille Shutters (AGS) that automatically adjust to optimize aerodynamics and fuel efficiency is becoming more prevalent, reflecting a trend towards technologically advanced grille systems. These factors collectively drive the expansion and evolution of the automotive front grille market, influencing both design and functionality in modern vehicles.

The global Non-Visible Active Grille Shutters market size was estimated at USD 727.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

13.10% during the forecast period.
