Abstracts

Non-water-miscible coolant lubricants have some advantages compared to water-miscible types. Thanks to their generally higher kinematic viscosity, they have a good lubricating effect. Besides this, they are characterized by a high pressure susceptibility and good corrosion properties. Another advantage is that with non-water-miscible coolant lubricants no biocides are required for fighting bacteria and fungal attack, as they are virtually germ-free and resistant to bacteria. Their service life is thus considerably longer than that of water-miscible coolant lubricants.

The global Non Water Miscible Coolant Lubricants market size was estimated at USD 1280.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
