Abstracts

The Nonplanar Ring Oscillator (NPRO) is a laser oscillator with a special monolithic design that is very stable, compact and robust. The working principle of the non-planar ring oscillator is based on the non-planar ring cavity. In the non-planar ring cavity, the propagation path of light forms a closed loop, so that the light energy is continuously reflected and enhanced in the cavity. At the same time, due to the non-planar design, the competition of laser modes can be effectively suppressed, thereby achieving single-frequency laser output, and can also effectively improve the stability and output power of the laser.

The global Nonplanar Ring Oscillators Npro market size was estimated at USD 125.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.75% during the forecast period.
