### Report Overview

The Normal Pressure Hypoxia Environment Simulation System is a specialized equipment designed to replicate the effects of high-altitude or low-oxygen environments at normal atmospheric pressure. This system is crucial for training pilots, astronauts, and mountaineers to acclimate to conditions where oxygen levels are significantly lower than at sea level. It operates by controlling the oxygen concentration within a sealed chamber, allowing users to experience hypoxic conditions without the need for pressurized suits or decompression procedures. The system is equipped with advanced monitoring and control mechanisms to ensure the safety of the participants, as well as to provide accurate data on their physiological responses to hypoxia. This technology is not only used for acclimatization but also for research purposes, helping scientists understand the effects of low oxygen levels on the human body and develop countermeasures for high-altitude or space environments.
