Report Overview

A Normal Pressure Plasma System is a technology used to generate and utilize plasma at atmospheric pressure for various industrial and scientific applications. Unlike low-pressure plasma systems that require a vacuum, normal pressure plasma systems operate in ambient air, making them more versatile and easier to integrate into manufacturing processes. These systems are used for surface treatments such as cleaning, activation, coating, and etching of materials. Applications span industries like electronics, automotive, textiles, and medical devices, where they enhance adhesion, improve surface properties, and enable precise material modifications without the need for complex vacuum infrastructure.
