Abstracts

α -Hydroxyalkyl Amide, referred to as HAA. HAA is a class of amide compounds containing 2-4 hydroxyl functional groups. Because its hydroxyl group is in the α position and is affected by the N atom, it is highly active and can be used as a chemical intermediate and a crosslinking agent for carboxyl-containing polyester resins and polyacrylic acid resins. As a curing agent for polyester resins, its role and status are increasing, especially when the use of TGIC is gradually restricted. Due to its environmental protection and the continuous research and development of related supporting resins, the application of HAA will continue to expand, and studying its properties and functions has great practical value. The global main manufacturers of α -Hydroxyalkyl Amide include Sir Industriale, Megara Resins, EMS-CHEMIE AG, Luan Jietonda and Ningbo South Sea Chemical, etc. The global five largest players have a share approximately 56% in terms of revenue. On the one hand, companies need to ensure that the α -HAA curing agents produced meet relevant quality standards and take necessary safety measures during the production process to prevent accidents. On the other hand, they should actively promote technological innovation and research and development to improve the competitiveness and added value of products. Pay attention to market dynamics and industry trends, adjust corporate strategies in a timely manner, and adapt to changes in market demand. As people's requirements for product quality and environmental protection performance increase, α -HAA, as an environmentally friendly and high-efficiency curing agent, has a very broad market prospect. It is expected that in the next few years, as the demand for high-performance and environmentally friendly products in various industries increases, the market prospects of α -HAA will be broader.

The global α -Hydroxyalkyl Amide market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80%

during the forecast period.
