## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on  $\alpha$ -type High Strength Gypsum competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Alpha-type high-strength gypsum is a high-strength, low-porosity alpha-type hemihydrate calcium sulfate produced through special processes (such as autoclaving or pressurized liquid-phase methods). Its core is alpha-type hemihydrate gypsum crystals. Compared to ordinary gypsum, it exhibits higher compressive strength and better mechanical properties. Alpha-type high-strength gypsum primarily utilizes industrial by-product gypsum such as phosphogypsum, citric acid gypsum, and salt gypsum as raw materials. The quality and stable supply of these raw materials are crucial for midstream production. Global sales in 2024 were approximately 7 million tons, with an average market price of approximately US\$200 per ton. The industry's gross profit margin ranges from 12% to 28%. Generally,  $\alpha$ -type high-strength gypsum has very high strength, more than three times that of ordinary gypsum powder. It has good mechanical properties, workability, environmental performance and biological properties.  $\alpha$ -type high-strength gypsum can not only replace traditional building gypsum to enhance product quality, but also has a wider range of applications, such as precision casting, high-end building materials, arts and crafts, medical, aviation and shipbuilding. After several years of research, development, and application, the production process and equipment for  $\alpha$ -high-strength gypsum materials have been improved and refined. As the application areas of  $\alpha$ -high-strength gypsum expand and demand gradually increases, enterprises need to develop innovative and practical production methods and processes, while actively exploring the high-end market for gypsum products.

The global ?-type High Strength Gypsum market size was estimated at USD 1400.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
