Report Overview

Offshore aquaculture services encompass a range of specialized activities aimed at cultivating fish, shellfish, and seaweed in open ocean environments, often involving deep-water or exposed sites beyond nearshore areas. These services include farm design, installation, maintenance, and operation of cages, nets, and mooring systems, as well as monitoring, feeding, health management, and harvesting solutions. The sector also integrates advanced technologies such as remote sensing, automated feeding systems, and data analytics to optimize production efficiency and environmental sustainability.
