Report Overview

Offshore and Onshore Wind EPC, or Engineering, Procurement, and Construction, is a comprehensive service model utilized in the wind energy industry. This approach encompasses the entire lifecycle of a wind power project, from conceptualization and design to the procurement of necessary materials and equipment, and finally, the construction and commissioning of the wind farm. The Offshore Wind EPC specifically refers to projects located in marine environments, which demand specialized engineering and construction techniques to account for the unique challenges posed by water depths, wave conditions, and maritime regulations. On the other hand, Onshore Wind EPC pertains to wind projects situated on land, which also require tailored solutions to address local environmental, logistical, and regulatory factors.
