Report Overview

Antistatic agents for oil products are products that prevent the generation of static electricity during the transportation or loading and unloading of fuel oil. Due to the rapid flow of fuel, a large amount of electrostatic charges can accumulate, resulting in unsafe factors. By adding anti-static agents, the charge in the large area is detonated through grounding. Antistatic agents for oil products are widely used in light and heavy fuels such as naphtha, diesel, gasoline, and heavy oil. Ensure that the anti-static performance of the oil meets safety standards, thereby resisting major safety hazards caused by static electricity.
