Abstracts

Oil-impregnated insulating paperboard is an insulating material with excellent electrical and mechanical properties, which is formed by using insulating paperboard (usually made of unbleached kraft wood pulp as raw material and made by sticky pulping) as the base material and infiltrating insulating oil (such as transformer oil, etc.) into the pores of the paperboard through an impregnation process. This treatment method utilizes the complementary effects of insulating oil and paperboard, making the oil-impregnated insulating paperboard perform well in dielectric properties, heat resistance, durability, etc.
