Report Overview

Omeprazole Sodium API, or Active Pharmaceutical Ingredient, refers to the pure chemical compound omeprazole sodium, which is the primary therapeutic component used in the production of omeprazole-based medications. Omeprazole sodium is a proton pump inhibitor, which means it works by reducing the production of stomach acid. This is achieved by inhibiting the enzyme system in the stomach wall that produces acid. As a result, omeprazole sodium API is commonly used to treat conditions such as gastroesophageal reflux disease (GERD), peptic ulcers, and other acid-related disorders. In its API form, omeprazole sodium is a white to off-white crystalline powder that needs to be formulated into a dosage form, such as tablets or capsules, before it can be used as a medication. The API must meet strict quality and purity standards to ensure its safety and efficacy in pharmaceutical applications.
