Report Overview

An omnidirectional conductive sponge is a versatile material designed for electrical conductivity in all directions?X, Y, and Z axes. This sponge is typically made from a polymer, such as polyurethane, which is treated or embedded with conductive materials, allowing it to efficiently conduct electricity across its entire surface and structure. Due to its flexibility, ventilation, and elasticity, this sponge is widely used in electronic devices for electromagnetic interference (EMI) shielding, grounding, and as gaskets in various applications. The omnidirectional conductivity ensures consistent performance regardless of how the material is bent, compressed, or stretched, making it ideal for use in environments where reliable electrical conductivity and shielding are critical.
